

Joint Supervision at Tsukuba University

Nor Farhana Bte Mohd Barnoh, MJIT, Universiti Teknologi Malaysia

Life as Tsukuba University Exchange Student (Part 2)

Assalamualaikum and konnichiwa minna-san!

Here we meet again! Such an amazing and beautiful scenery Tsukuba offered during autumn. Along the road, almost all tree leaves changed its colours especially the maple (momiji) leaves changed either to scarlet or orange-ish/red, or bright yellow-ish. You can't get enough with the views and the season itself. It is such a candy to my eyes. The weather is also very nice but it's getting colder day by day. After presenting my first stage evaluation last month, I became clearer with my research project. I want to thank to all the lecturers which are involved in the evaluation stage, they give great comment and this encouraged me to improve my understanding and skills.

In November, two big events; Autumn Sports Day and Tsukuba Marathon held in Tsukuba. Unfortunately, my laboratory members did not joined the event because they have other program with high school students. They have to conduct the water quality experiment. This activity aims to give an introduction of conducting experiment to the high school students and shared the knowledge among them. Also, the student could get hand-on experience which sometimes not offered at the school. This would increase their soft and generic skills. In addition, on November 23rd 2014, big event was held which is the Tsukuba Marathon. The participants are coming from all around Japan from different ages and genders. Two members from Utsumi's Laboratory also participated in the marathon. They managed to finish the marathon in 5 hours, but did not win any top places. That's all for now and until we meet again in next article.
