

Joint Supervision

Wan Khairunnisa binti Wan Abdul Khodir, Malaysia-Japan International Institute of Technology (MJIT)

Weekly Laboratory Seminar

こんにちはみなさん！ In this week's article, I would like to talk about laboratory seminar. Laboratory seminar is the important thing to discuss in the current progress research of the students, sharing the knowledge among the students and lecturer and up-to-date the upcoming events. Besides doing research, presentation skill is a necessary to deliver the message and understandable towards the audience.

Practice in front of friends and practice in front of the mirror is a common technique used to enhance the skill. Furthermore, the comments from friends are very useful to upgrade the presentation skill and repair the slides. Thus, do not scare to share your opinion with others.

Usually, supervisors are always busy and sometimes might forget the progress made by the students, especially the supervisor which has quite a number of students under his or her supervision. Thus, by having weekly laboratory seminars, it will ease both parties without any problem. In colloidal laboratory, we usually had a seminar on Monday at 4.15 pm. Even in MJIT, which I am under Ecological Engineering laboratory, always having weekly meeting at least for 30 minutes. In my opinion, it is crucial for every group research to have a weekly seminar rather than none at all.
