

Joint Supervision Programme

Yus Amiera binti Yusaimi, Malaysia Japan International Institute of Technology, UTM.

Hello, March (YusAmiera binti Yusaimi, January – June 2015)

It's been two months and a half since we arrived here. How time flies! So many things happened within these two months. But, the most interesting, spring is just around the corner and how excited I am to watch cherry blossoms soon.

In these two months, I've gained a lot of knowledge, especially in laboratory works. My research partners, Tasbiyah, Aeyshah and I have been exposed on proper usage of laboratory equipment and apparatus. I am so impressed on how they organized and managed the laboratory systematically which can be applied in our laboratory at MJIT. They are very concerned with systematic work from beginning to the completion of experiment, especially in the way of waste disposal. They also emphasized on proper waste management in which solid, liquid, chemical or even biological waste will certainly be disposed in the correct way.

Apart from that, ten of my friends that participated in the Sakura Science Program came in the middle of February for a three weeks exposure here. We spent a lot of good times together, apart from doing experiment in the laboratory, especially when we went out during weekend. It was such an unforgettable memory with them!
