Amazing Nemophila, (Aeyshah Abang Kassim, January – June, 2015)

Minna-san! Konnichiwa! May 7th was sweet moment for me because after finished our seminar, all laboratory members went to the very famous Hitachi Seaside Park in Hitachinaka, Ibaraki Prefecture. It took 1 hour and a half to reach there by car. The market sold seafood such as fresh fish, squid, crab at a very cheap and reasonable price. But we decided to have sushi for lunch at the nearby beach market restaurant. This was my second time eating out at sushi restaurant. I found that the restaurant provide variety menu of good quality sushi than the previous one.

After that, we moved to the sea side park where a lot of tourist came here every year. The most amazing is we saw a sea of baby blue eyes shrubs species called nemophila. The vast of very soft blue or white color of nemophila covered the grass makes the park so mesmerizingly attractive. Thank you all laboratory members for sweet memorable moment shared together.
