

Joint Supervision Programme

Yus Amira binti Yusaimi, University of Technology Malaysia (UTM)

June is around the corner (Yus Amira Yusaimi, January – June, 2015)

The time ticks minute by minute, day by day, week by week and now is already end of May. Time flies, I was here for the past 5 months and with another one month before going back for good. Undoubtedly, many experiences I have gained through this staying. Currently, my research going smoothly with the help of Utsumi-sensei and my fellow lab members, although not everything goes according to the plan, due to some minor unexpected problems.

Nonetheless, on 13th of May, all international students were required to take health examination check-up that was held at the International Students Centre (ISC) and school clinic. Such medical examination shows that the university is taking good care of their students' welfare even though we came from different countries. At the same time, while waiting for my turn during the health examination, I got a chance to meet some new friends coming from other countries such as Jordan, Philippines and China.
